DOCUMENT CONTROL+
FOR SAP PLM 7

SUMMARY

Document Control+ for PLM 7 bundles Document enhancements in one solution and offers a full disablement of the ACL Whitelist functionality including deactivation of ACF Java Applets. Express upload functionality seamlessly integrated into the standard Document WebUI directly uploads originals and checks them in. Furthermore, a stand-alone WebDynpro application offers lean and simple express creation of Document Info Records (DIR) with and without originals.

CHALLENGE

The Document WebUI included in the SAP PLM 7 suite offers a full featured and feature rich web user interface. However, the Whitelist functionality need to upload and download originals (files) to Documents can be troublesome dependending on the implementation scenario. It is loading Java Applets that can cause the used browser to freeze or crash. Whitelist distribution across all clients is always a pain-point and the Whitelist functionality can not be deactivated in SAP standard.

The feature rich WebUI may also be too complex for some occasional users or for some use case scenarios.
